amanj7820@gmail.com

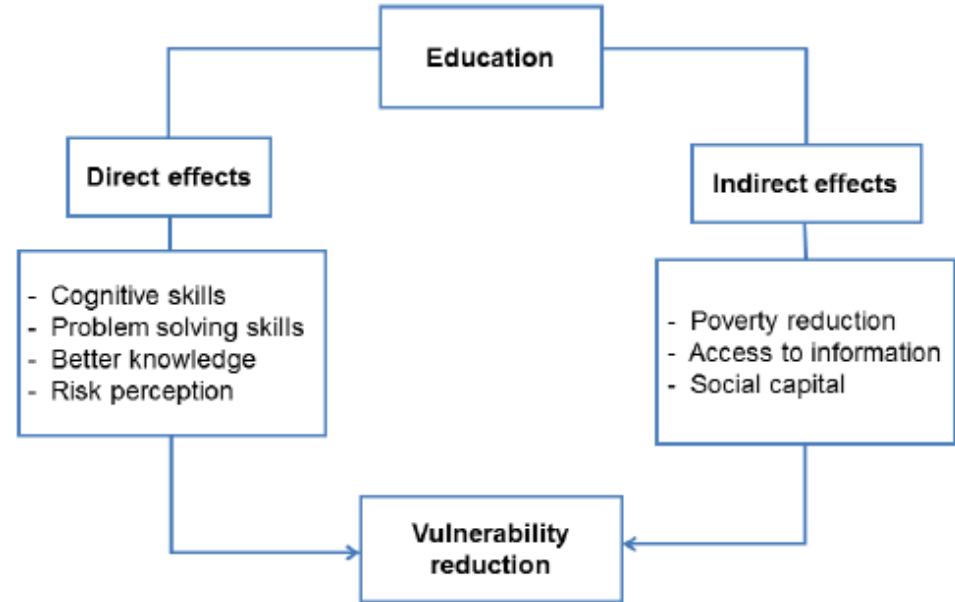

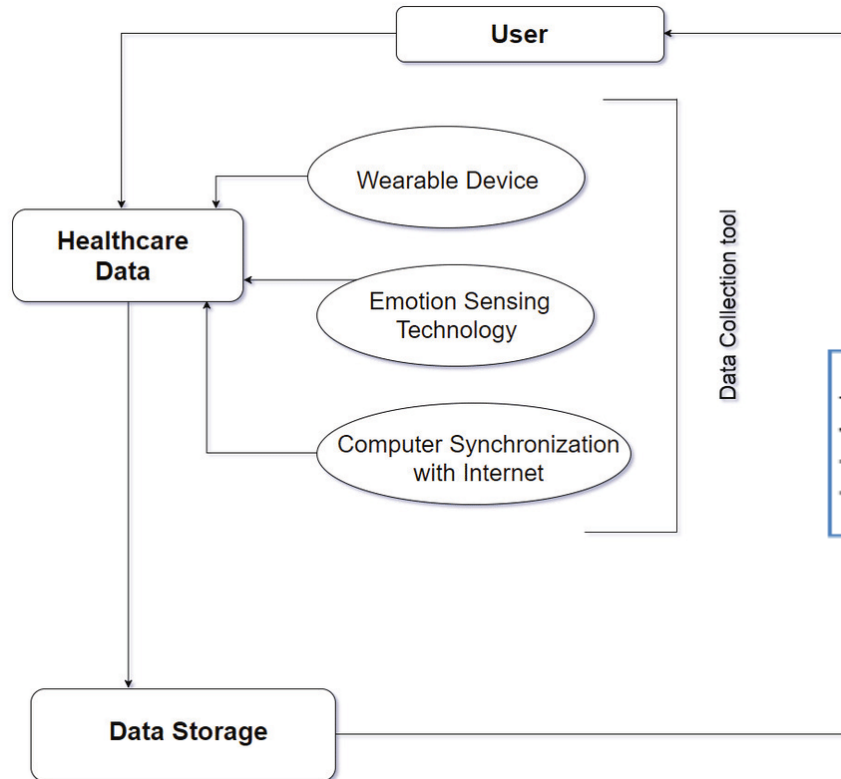

Hackathon Category Chosen:

Category # 1: Automation for Good:-(2 parts I have made)

1)NGOs and Public Sector

2) Education(Excel Pdf Automation)

Technical Architecture/ POC:

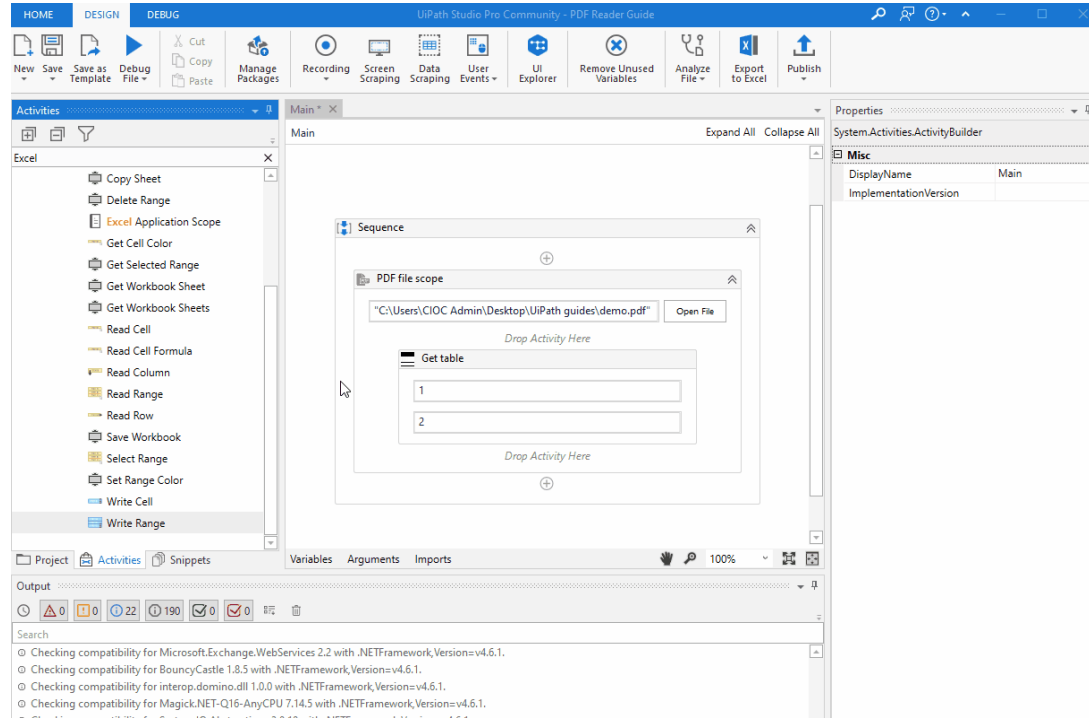

Technology/Tool Stack Used:

- Technology we have used to build the RPA are uiPath software which are provided automation front-end and also provided faster the process can execute.
- The other methods are also used like blueprism automation anywhere to build the automation projects
- These education and health care related are helping the peoples to find out the best solution which will provided by robotic process automation.

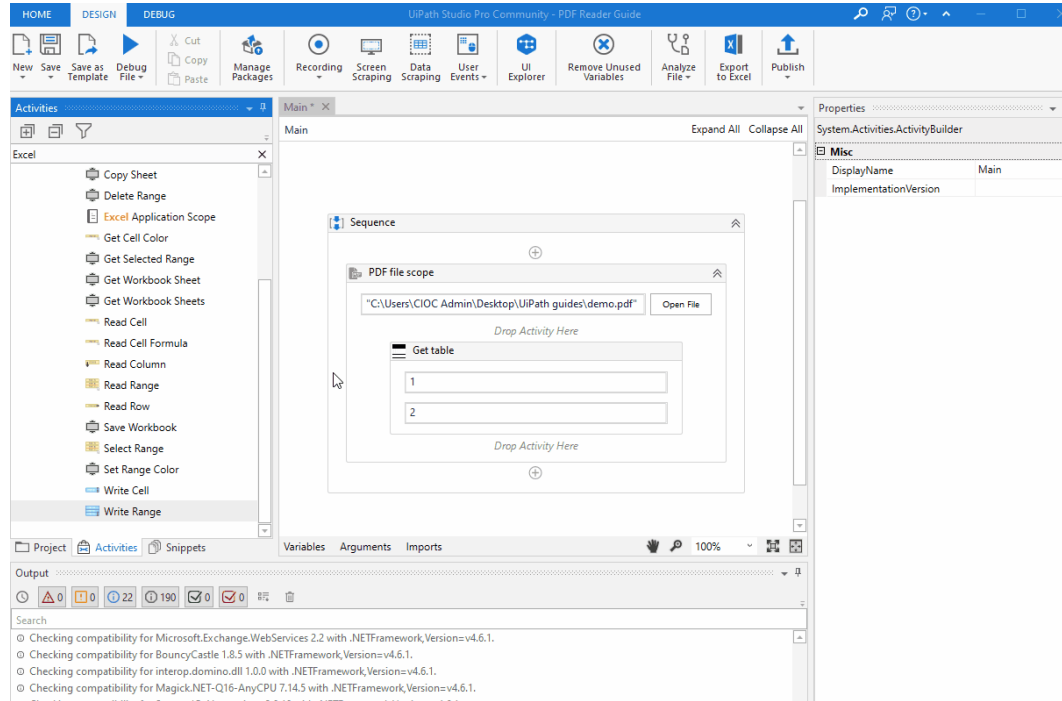

Brief summary of the Project

- The summary of our project is to find out the best health care facilities to provide the best treatments after illness to find out the best treatment.
- The Education project provides the students to find out the best solution in exam time so they can easily identify the problem and find out any solution at any time.
